

EXAMPLE 1:

Description:

While taking admission in college.

Plan:

We first need to decide which things will I require as documents or how much will I need to score in examination as per the cut-off of the desired college.

Prepare:

Furthermore, I need to check how much fees can I pay and if I can somehow fund my tuition fees via scholarship.

Process:

We will first decide which career path we want to follow. Like if we want to pursue data science then there are multiple fields such as data engineer, data analyst, AI and ML engineer, data scientist and much more.

Analyze:

Obviously, I will check the demand and growth in the respective fields before making the decision. I will prioritize those career path that are in demand over the outdated ones.

Share:

After all this, I will finally communicate with the colleges I want to apply to and understand their process of applying.

Act:

In the end, I will secure my admission in the desired college by paying the fees.

EXAMPLE 2:

Description:

While cooking.

Plan:

We first need to decide what mood am I in to eat and cook. For instance, consider chicken.

Prepare:

Then I will decide which dish to prepare as there are hundreds of ways to cook chicken and I will check the ingredients and utensils require to made that dish.

Process:

After then, I will choose the way I want to cook chicken as the order in which we use and cook ingredients can make the difference of north to south.

Analyze:

I will see that if I don't have a certain ingredient like curd then can I still work without it at the risk of compromising the taste. Will the change in utensil cause any difference in taste.

Share:

Moreover, I will ask for some advice from my mother and I can also refer to YouTube tutorials and can make improvisations.

Act:

At last, I will finally prepare the dish and will enjoy it.
